(X4) ID PREFIX TAG	SUMMARY STATEMENT OF DEFICIENCIES (Each deficiency must be preceded by full regulatory or LSC identifying information)		
F 0805 Level of Harm - Immediate jeopardy to resident health or safety Residents Affected - Some	Ensure each resident receives and the facility provides food prepared in a form designed to meet individual needs. Based on interviews, record reviews, document review, and facility policy review, the facility failed to ensure residents who received mechanically altered diets were provided a meal consistent with their prescribed diet and of the appropriate texture and form to meet their individual needs. Further, the facility failed to ensure policies addressing the criteria for foods consistent with a mechanical soft diet were developed, implemented, and available to staff. Staff were not knowledgeable on what foods were acceptable for residents with orders for a mechanical soft diet. This failure affected 23 residents with orders for mechanical soft diets. Specifically, on 08/14/2023, the menu indicated the lunch meal for residents with mechanical soft diet orders would consist of ground pork, and the dinner meal would consist of a ground chicken salad plate. Instead, the facility prepared and served residents with orders for mechanical soft diets cubed pork tips cut into one (1) to one and one-half (1 1/2) inch cubes for lunch and a salad containing lettuce, dried croutons, and fried onion rings for dinner. It was determined the facility's non-compliance with one or more requirements of participation had caused, or was likely to cause, serious injury, harm, impairment, or death of residents. The Immediate Jeopardy (IJ) was related to State Operations Manual, Appendix PP, 483.60 (Food and Nutrition Services) at a scope and severity of K. On 08/16/2023 at 7:22 PM the Administrator and Director of Nursing (DON) were provided the IJ template and notified of the findings at the immediate jeopardy level in the area of Food and Nutrition Services at F805- Food in Form to Meet Individual Needs. The IJ began on 08/14/2023 and continued until 08/17/2023, when the facility implemented corrective actions to remove the immediacy and prevent further recurrences. Findings included: A review of the facility's Diet Master list, printed on 08/14/2023, identified 23 residents, including Resident #25 and Resident #58, that were prescribed a mechanical soft diet. A review of Resident #25's Facesheet revealed the facility admitted the resident on 06/30/2015 with diagnoses that included abnormal weight loss, and nutritional deficiency. A review of a quarterly Minimum Data Set (MDS), with an Assessment Reference Date (ARD) of 07/05/2023, revealed Resident #25 had a Brief Interview for Mental Status (BIMS) score of 15, indicating the resident was cognitively intact. Per the MDS, Resident #25 received a mechanically altered diet. (continued on next page)		

Any deficiency statement ending with an asterisk (*) denotes a deficiency which the institution may be excused from correcting providing it is determined that other safeguards provide sufficient protection to the patients. (See instructions.) Except for nursing homes, the findings stated above are disclosable 90 days following the date of survey whether or not a plan of correction is provided. For nursing homes, the above findings and plans of correction are disclosable 14 days following the date these documents are made available to the facility. If deficiencies are cited, an approved plan of correction is requisite to continued program participation.

(X4) ID PREFIX TAG	SUMMARY STATEMENT OF DEFICIENCIES (Each deficiency must be preceded by full regulatory or LSC identifying information)		
F 0805 Level of Harm - Immediate jeopardy to resident health or safety Residents Affected - Some	A review of Resident #25's Care Plan, with a start date of 04/28/2019, revealed the resident was at an increased nutritional risk for potential weight changes related to a history of weight loss, fluctuating appetite, and a mechanically altered and/or therapeutic diet. The Care Plan reflected a diet order of regular with chopped meats and aspiration precautions on 01/29/2023 and indicated on 06/27/2023 speech therapy would treat the resident for dysphagia. A review of a Dietary Note, dated 03/14/2023 and documented by the Registered Dietitian (RD), revealed Resident #25's diet consistency decreased in January 2023 from regular to mechanical soft due to reported coughing after eating. The note indicated the resident had difficulty swallowing. A review of a Speech Therapy SLP [speech language pathology] Evaluation & Plan of Treatment, revealed Resident #25 was placed on speech therapy caseload beginning on 06/27/2023 for Dysphagia [difficulty swallowing] Therapy. The reason for referral was documented as exacerbation of decreased oral/pharyngeal function, risk for aspiration, decreased functional activity tolerance, and dysphagia. A review of Resident #58's Facesheet revealed the facility admitted the resident on 12/22/2022 with diagnoses of Alzheimer's disease, dysphagia, and pulmonary fibrosis (scarring of the lungs). A review of a quarterly Minimum Data Set (MDS), with an Assessment Reference Date (ARD) of 06/29/2023, revealed Resident #58 had a Brief Interview for Mental Status (BIMS) score of 3, indicating the resident had severe cognitive impairment. According to the MDS, the resident received a mechanically altered diet. A review of Resident #58's Care Plan, with a start date of 12/22/2022, revealed the resident was at an increased nutritional risk for potential weight changes related to fluctuating appetite and a mechanically altered and/or therapeutic diet. A review of Resident #58's August 2023 Physician Orders revealed an order dated 12/22/2022 for a mechanical soft diet. A review of the facility's week one 2023 Spring/Summer Menus, dated 08/14/2023, indicated the planned menu items for lunch for Mechanical Soft included ground pork tips with gravy. A review of the Recipe Summary Card for Braised Pork Tips in Gravy, dated 11/22/2015, revealed instructions to dice the pork into one-inch pieces. Per the recipe, Mechanical Soft Steps included, .Remove desired number of servings to chop for mechanical soft diets. Use a knife/fork or food processor to chop foods to the desired consistency . There were no further directions as to what the desired consistency was. During an observation on 08/14/2023 at 12:20 PM, Resident #25's meal meal included pork cut into one to one and one-half inch cubes. During the observation an interview was conducted with Nurse Aide (NA) #2 who described the food on Resident #25's tray as diced meat over noodles with gravy. NA #2 also stated the resident's meal ticket indicated MS (mechanical soft), but NA #2 was unable to say what MS stood for. NA #2 gave the resident a bite that consisted of one noodle and one piece of cubed meat but did not attempt to cut the piece of meat into smaller portions. NA #2 asked the resident if the uncut meat was ok, but the resident did not answer. At 12:27 PM, Resident #25 was observed coughing during the meal, and the resident asked for some milk. Resident #25 said they did not want any more of the meat, because it was tough to eat. (continued on next page)

(X4) ID PREFIX TAG	SUMMARY STATEMENT OF DEFICIENCIES (Each deficiency must be preceded by full regulatory or LSC identifying information)		
F 0805 Level of Harm - Immediate jeopardy to resident health or safety Residents Affected - Some	During an interview on 08/14/2023 at 1:37 PM, LPN #13 was unable to state what type of diet/texture Resident #25 was supposed to have. She was unable to state what meats would not be appropriate for a MS diet. LPN #13 stated she observed the cubed meat that was served, and appeared like the all the meals that were served by the facility. During an interview on 08/14/2023 at 1:08 PM, [NAME] #1 stated the kitchen served three textures: regular, chopped, and pureed. The cook then stated the mechanical soft diet included chopped meats. The cook said raw fruits and vegetables were not allowed on the mechanical soft diet. The cook further stated that any other food was appropriate for the diet if it was soft. A review of the facility's week one 2023 Spring/Summer Menus, dated 08/14/2023, indicated the planned menu items for dinner for Mechanical Soft included a ground chicken salad plate and french fries. The planned menu items for dinner for Regular included onion rings. A review of the Recipe Summary Card for Chicken Caesar Salad, dated 06/05/2015, revealed instructions to cut chicken breasts into one-half-inch strips and to shred romaine lettuce. Mechanical Soft Steps included, .Remove desired number of servings to chop for mechanical soft diets. Use a knife/fork or food processor to chop foods to the desired consistency . There were no further directions as to what the desired consistency was. During an interview on 08/14/2023 at 2:24 PM, the Dietary Manager (DM) stated the facility served only regular, mechanical soft, and pureed textured diets. Per the DM, there was no diet manual for the kitchen staff to refer to on what different food textures were allowed on each diet. The DM stated no raw fruits or vegetables should be served on the mechanical soft diet, but then stated the residents on a mechanical soft diet would get processed chicken on romaine lettuce for dinner. During an interview on 8/14/2023 at 5:21 PM, the Speech Therapist (ST), stated foods such as raw vegetables, anything that was hard to chew, meats on the bone, and those meats that were not chopped up were not appropriate for the mechanical soft diet because they were hard to chew and could pose a choking risk. The ST confirmed chopped chicken on raw romaine lettuce with croutons and fried onion rings on the side were not appropriate textures for the mechanical soft diet. The ST then stated the facility did not have anything in writing for the employees to refer to on which foods were appropriate for each of the three textures served. During an interview on 08/14/2023 at 5:06 PM, [NAME] #3 stated he was serving the residents on a mechanical soft diet a plate of lettuce topped with chopped chicken and croutons with fried onion rings on the side. The cook then stated there was no separate menu he referred to when serving the mechanical soft diet. During a dinner meal observation on 08/14/2023 at 5:30 PM, Nurse Aide (NA) #14 described the meal for Resident #58 as chicken salad with fried onion rings, croutons, and iceberg lettuce with longer stems. NA #14 stated the meal ticket indicated the resident should receive a mechanical soft diet. NA #14 said she did not think the salad was appropriate for mechanical soft but stated staff served the residents the meal as prepared by the kitchen. On 08/14/2023 at 5:40 PM, the Administrator was notified of the concern with the mechanical soft diet meal and the need to stop the meal service. During an interview on 08/14/2023 at 5:59 PM, the Director of Nursing (DON) stated the facility (continued on next page)

(X4) ID PREFIX TAG	SUMMARY STATEMENT OF DEFICIENCIES (Each deficiency must be preceded by full regulatory or LSC identifying information)		
F 0805 Level of Harm - Immediate jeopardy to resident health or safety Residents Affected - Some	stopped service to the residents on mechanical soft diets and indicated the kitchen would serve sloppy joes to those residents, instead of the chopped chicken on raw lettuce with croutons and fried onion rings as was prepared. During an interview on 08/15/2023 at 12:45 PM, Certified Nursing Assistant (CNA) #15 said the facility had been serving mechanical soft as chopped meats and indicated that staff were just learning that the meats were supposed to be chopped smaller/finer than they had been serving. CNA #15 said staff had not received training on what foods were appropriate for each diet texture. During an interview on 08/15/2023 at 9:04 AM, the Medical Director (MD) stated the facility offered regular consistency, mechanical soft, and pureed textured diets. The MD said he was not aware of issues with the wrong texture diets being served. The MD stated raw lettuce or fried onion rings would not be appropriate, unless the onion rings were very soggy, due to concerns of choking or aspiration. The MD stated he was very concerned that residents prescribed a mechanical soft diet were being served lettuce and fried onion rings and agreed raw lettuce and fried onion rings should not have been served for the mechanical soft dinner meal. He stated he expected the RD to be involved in kitchen oversight. During an interview on 08/14/2023 at 2:40 PM, the Registered Dietitian (RD) stated she was primarily responsible for the residents' clinical assessments and was not involved in the kitchen unless requested. The RD further stated the facility utilized a pre-planned menu cycle which provided menus, recipes, tray tickets, and was approved by the menu company's corporate RD. Per the RD, through this menu system, the mechanical soft diet included chopped meats and only cooked vegetables, but there was no diet manual available for the kitchen to refer to on what specific foods were appropriate for each diet. On 08/15/2023 at 2:00 PM, the RD provided a copy of a diet manual but indicated the facility had not adopted it, so staff did not refer to it. During an interview on 08/15/2023 at 2:34 PM, the Assistant Director of Nursing (ADON) stated the facility had discussed implementing the diet manual associated with their menu system multiple times but had not yet implemented the manual. The ADON then stated the facility's kitchen served three diet consistencies, including regular, regular with chopped meats, and a pureed consistency. Per the ADON, the diet manual describing which foods were appropriate for each consistency had not been implemented because it was a big change for the kitchen staff. According to the ADON, the kitchen staff were used to country cooking and needed quite a bit of training to adhere to the diet manual. During an interview on 08/17/2023 at 10:59 AM, the ADON stated she expected staff to ensure the right diet was served to the residents. The ADON said if staff were not ensuring the correct foods were being served, they were putting residents at risk of choking and potential aspiration. During an interview on 08/17/2023 at 12:41 PM, the DON said there had been inconsistencies on what the different diets should look like and miscommunication between the dietary manager and other staff. The DON stated some of the nursing staff were not clear on what type of consistency the diets should look like, and the facility did not have a formal diet manual addressing the different diets. The DON stated she would expect for all the residents on mechanical soft diets to be served the mechanical soft ground consistencies and the CNAs should not have served the residents one-inch cubed pork. The CNAs should have returned the tray to the kitchen and requested a corrected diet tray with the correct texture/consistency. The DON stated serving salad with fried onion rings as well as cubed (continued on next page)

(X4) ID PREFIX TAG	SUMMARY STATEMENT OF DEFICIENCIES (Each deficiency must be preceded by full regulatory or LSC identifying information)		
F 0805 Level of Harm - Immediate jeopardy to resident health or safety Residents Affected - Some	pork created a potential choking risk for all the residents on mechanical soft diets. During an interview on 08/17/2023 at 3:39 PM, the Administrator revealed he expected dietary staff to send out the correct diet during meals and the staff passing trays to ensure they were providing the correct diet to each resident. The Administrator stated if the correct food items and textures were not served, it put those residents at risk for aspiration, choking, or even death. He stated the residents should have received the correct diet and texture. ***** On 08/17/2023 at 1:39 PM, an acceptable Removal Plan was received which documented: Removal Plan: F805 The facility will ensure residents with orders for a mechanical soft diet will receive the appropriate diet texture and form to meet the individual needs. 1. 08/15/2023, through an impromptu QA, the facility adopted and implemented the newly approved diet texture policy that included guidelines for each texture type and has adopted and defined three texture types and forms to meet each resident's individual needs in accordance with the International Dysphagia Diet Standardization Initiative (IDDSI). This policy was approved by the Registered Dietitian and the Speech Therapist from the therapy department. The three texture types adopted are: a. Regular b. Mechanical Soft, which is identified as Level 6 Soft & Bite-sized foods in the IDDSI. c. Puree 2. On 08/15/2023, all resident diet orders reviewed by Director of Nursing, and textures clarified to the three adopted texture types: a. Regular b. Mechanical soft c. Puree 3. 08/16/2023 The Dietary Manager and cooks were trained by the DON on the new Diet Texture Policy. 4. On 08/15/2023 and 08/16/2023, all full time, part time, and prn, including all administrative, dietary, nursing, activity, and therapy department staff, hospice providers, and providers were trained by Director of Nursing, Administrator, Dietary Manager, and Staff Developer on the policy for what MS stands for (Mechanical Soft diet) to include what the texture looks like with visual and demonstration. Two associates (one out of the country and one on medical leave) who we were unable to contact. They will be educated in the same manner as all other staff by the Staff Developer prior to (continued on next page)

(X4) ID PREFIX TAG	SUMMARY STATEMENT OF DEFICIENCIES (Each deficiency must be preceded by full regulatory or LSC identifying information)		
F 0805 Level of Harm - Immediate jeopardy to resident health or safety Residents Affected - Some	them being allowed to work. 5. On 08/15/2023 and 08/16/2023, all full time, part time, and prn, including all administrative, dietary, nursing, activity, and therapy department staff, hospice providers, and providers were trained by Director of Nursing, Administrator, Dietary Manager, and Staff Developer on the policy for what on what the mechanical soft diet looks like and what it consists of with a demonstration/visual. Two associates (one out of the country and one on medical leave) who we were unable to contact. They will be educated in the same manner as all other staff by the Staff Developer prior to them being allowed to work. 6. On 08/15/2023, IDDSI Level 6 Soft and Bite Sized visual aids were posted in the kitchen, dining areas, nurses' stations, activity room, therapy gym, and on the meal carts for staff references. 7. On 08/15/2023 and 08/16/2023, all full time, part time, and prn, including all administrative, dietary, nursing, activity, and therapy department staff, hospice providers, and providers were trained by Director of Nursing, Administrator, Dietary Manager, and Staff Developer on our policy to promptly return the meal to the dietary department and request the appropriate texture meal if the kitchen sends out the wrong texture diet. Two associates (one out of the country and one on medical leave), who we were unable to contact. They will be educated in the same manner as all other staff by the Staff Developer prior to them being allowed to work. 8. Dietary Manager and Contracted Registered Dietitian, with input from the Speech Therapist, will produce a Dietary Manual that will include resources on different diet textures that are appropriate for each diet type to guide the kitchen staff by 08/17/2023 and updated as needed. In the meantime, the visuals are readily available to all staff. 9. On 08/15/2023, the Register Dietitian adjusted the menus with input from the Speech Therapist, to reflect GBCH's adopted diet textures. The Speech Therapist agrees that these diet textures are appropriate for the residents with orders for Mechanical Soft diets. 08/16/2023 order obtained from physician for Speech Therapy evaluation to determine if the adjusted diet consistency is appropriate for each resident with order for mechanical soft diets. 10. 08/16/2023, A QAPI [quality assurance performance improvement] plan was implemented regarding the facility's meal service to include diet consistencies and following physician orders for modified diet consistencies. The Nursing staff will observe meals to ensure the residents are served the diet texture as ordered. 11. Immediate corrective actions for residents identified: a. On 08/14/2023, Resident #25 was provided a replacement mechanical soft meal. b. On 08/15/2023, Resident #31. The meal was replaced with an appropriate mechanical soft texture meal and the resident consumed 100% of the meal with no chewing, swallowing, or choking incidences. 12. All corrections were completed on 08/17/2023. 13. This immediacy of the IJ was removed on 08/17/2023. ***** (continued on next page)
